

## CO<sub>2</sub>e indicators in 2025 (according to Green House Gas Protocol)

|   |                                                                                                                                                                                                                                                                                                                                     |                                                               |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| 1 | For each delivery method, the average emissions of CO <sub>2</sub> equivalents, measured in grams per volume unit defined by the Institute, generated only during the distribution phase within the meaning of Article 2, 6° of the law, distinguishing between the following emissions:                                            |                                                               |
|   | Scope 1                                                                                                                                                                                                                                                                                                                             | Direct emissions from sources owned or managed by the company |
|   | Scope 2                                                                                                                                                                                                                                                                                                                             | Indirect emissions linked to energy consumption               |
|   | Scope 3                                                                                                                                                                                                                                                                                                                             | Other indirect emissions generated by outsourced activities   |
| 2 | For each method of delivery and for the different types of emissions the average of CO <sub>2</sub> equivalent emissions, measured in grams, per volume unit defined by the Institute, generated only during the distribution phase within the meaning of Article 2, 6° of the law, distinguishing between the following emissions: |                                                               |
|   | Scope 1                                                                                                                                                                                                                                                                                                                             | Direct emissions from sources owned or managed by the company |
|   | Scope 2                                                                                                                                                                                                                                                                                                                             | Indirect emissions linked to energy consumption               |
|   | Scope 3                                                                                                                                                                                                                                                                                                                             | Other indirect emissions generated by outsourced activities   |
| 3 | For each method of delivery, the average number of vehicle kilometres per parcel during the distribution                                                                                                                                                                                                                            |                                                               |
| 4 | The percentage of vehicle kilometres covered by zero-emission vehicles during the distribution                                                                                                                                                                                                                                      |                                                               |
| 5 | Possible accession to a sectoral sustainability charter                                                                                                                                                                                                                                                                             |                                                               |
| 6 | The percentage of renewable energy used in their buildings                                                                                                                                                                                                                                                                          |                                                               |
| 7 | The percentage of electric vehicles and zero-emission vehicles operated within the fleet                                                                                                                                                                                                                                            |                                                               |
